The Heart of Authentic Education

A vision for a different world. A new way forward. Begin with an education that embraces and integrates sustainability. Green School is a 'seed' that represents a tangible step in this direction.

Green School opened in September 2008, to link learning to real life situations that promote an understanding of and a stewardship for the environment. With a talented international faculty and small classes, the School uses holistic learning methods with a rigorous curriculum to inspire all of a child's capacities. Green School is the heart of authentic education.

SUSTAINABILITY IN FOUR AREAS

Education – The School prepares students who are cognizant of their role as stewards of the environment. With a holistic approach and methodology, the School embraces a spirit of inquiry and love of learning.

E-Design – The buildings, furniture, and amenities of the school are all made from bamboo and other easily renewable resources. The architecture across the campus takes advantage of the versatility of the material to create distinctive, open air structures with natural light that ensure a connection with nature and the best possible environments to learn.

Entrepreneurship - Preparing students for life through experiential opportunities and real-life applications is a key component of Green School's philosophy. Whether it's sustainable agriculture, social ventures, or small business, students get the opportunity to apply their skills through hands-on projects that count.

Environment - With its blending of cultures and appreciation of diversity, the island of Bali distinguishes and enriches the School. Sustainable agriculture and traditional irrigation practices provide a link between the wisdom of the past and the possibilities of the future. And with a terrain that ranges from volcanoes and jungles to reefs, rivers and the ocean, Bali gives the School a classroom like no other.

STUDENTS

Green School has a diverse student body from 16 countries with 20% being local Balinese. The inaugural class of over 100 students is enrolled in Preschool to Year 8 and will double in size next year. Each year a new class will be added as the School works toward accreditation through the Council of International Schools (CIS) and by offering International Baccalaureate (IB) program.

AUTHENTIC ROOTS

Long before 'being green' became fashionable, John and Cynthia Hardy incorporated sustainability into their work as entrepreneurs. As thirty-year residents of Bali, the Hardys have a love for the Island and the creation of Green School reflects their longstanding commitment to Bali and its future.

INTRODUCTION

Green School opened in September 2008 for students from Preschool through Year Eight, with highly talented students and faculty from communities in Bali and 16 countries around the world.

For more information about Green School, please visit our website: <http://www.greenschool.org/introduction>

OUR VISION

Green School ignites a passion for learning. Our students are curious, self-motivated, enthusiastic participants in their education. Green School provides the foundation for life-long intellectual growth, both on the campus and within the global community.

For more information about Green School's Vision, please visit our website: <http://www.greenschool.org>

John and Cynthia Hardy, Bali residents for over 30 years, have chosen to build Green School to reflect their passion for education. Their hope is that Green School will be an active learning center, an inspirational forum for students and educators around the world.

FOUNDERS

OUR LAND

Our eight-hectare campus bisecting the beautiful Ayung River is a productive organic farm. As part of the Green School curriculum, students will take an active role in developing and maintaining the production of the land.

For more information about Green School's Facilities, please visit our website: <http://www.greenschool.org/our-land>

Our distinctive buildings incorporate local bamboo, *alang-alang* grass, and mud walls. The Green School vision is to create a self-sustaining campus that generates its own renewable energy, to become an inspirational model for environmental and educational innovation.

SUSTAINABILITY

CURRICULUM

Our unique curriculum integrates holistic education with rigorous international academic standards. Green School provides students with the foundations to succeed in all areas of learning.

For more information about Green School's Curriculum, please visit our website: <http://www.greenschool.org/our-curriculum>

Our dedicated teachers, challenging curriculum, and inspirational learning environment enable each child to succeed and become leaders of their generation.
