

Overview

The Green School Internship Programme provides a supervised and meaningful working experience for Indonesian university students and/or recent graduates. We offer the unique opportunity to learn, share, and connect with our passionate and resourceful community in a safe, wall-less, and natural environment. Interns also get the chance to be directly involved in real projects and exposed to multiple activities around the campus.

Each year, a diverse group of interns come with their own special set of interests and skills to share, over the course of one full semester.. The programme is designed for interns to learn, grow, and take action now. Ultimately, interns will walk out with personal and professional growth, a network of like-minded professionals and a deeper understanding of education, sustainability, and green innovation projects.

Internships are offered depending on the needs and capacity of our school to receive and supervise interns. Please check the current available internship opportunities for Jan-Jun 2020 on our [website](#).
